

We don't need to sacrifice
the California desert
for renewable energy

The DRECP needs revision.

This will only happen with your input. Now.

The Desert Renewable Energy Conservation Plan (DRECP) closes thousands of acres of public lands to recreational use and industrializes California's fragile desert ecosystem and its last wilderness areas. Some rockhounding sites will become inaccessible.

Tell the DRECP –

YES to preserving recreational use of public lands

YES to point-of-use energy (rooftop solar)

NO to power transmission corridors through public lands

NO to utility-scale projects that fence us out of collecting areas

Comment directly www.drecp.org (deadline: Feb 23, 2015)
